

PFAS Injection Well Disposal Solutions

REPUBLIC[®]
SERVICES

Sustainability in Action

End the mobility cycle for
PFAS-contaminated liquid waste.

Republic Services is a leading provider of environmental and emergency response solutions. We provide customers safe and compliant disposal for highly concentrated PFAS-contaminated liquid waste in our secure injection well disposal facility in Winnie, Texas and Detroit, Michigan. These strictly regulated and permitted Class 1 injection well facilities are strategically positioned to accept a large volume of waste from all over the United States.

Our injection wells eliminate future environmental impacts of PFAS-contaminated liquid waste and help customers remain compliant with EPA guidance. Injection well disposal complements our other innovative technologies throughout the country. We offer safe and secure management of PFAS-contaminated solid waste, including secure disposal in our wholly-owned arid climate RCRA-permitted Subtitle C hazardous waste landfills, as well as thermal destruction, carbon filtration, ion exchange and resin filtration systems.

EXPERIENCED

SAFE

SECURE

HIGH-CAPACITY

ACCEPTED WASTE STREAMS

- ✓ Landfill leachate
- ✓ Aqueous film forming foam (AFFF)
- ✓ End-of-life products (e.g., spent cleaning solvents)
- ✓ Pollution control residuals (e.g., concentrates) from PFAS production and use

INDUSTRIES SERVED

- ✓ Manufacturing
- ✓ Plating and finishing
- ✓ Refining
- ✓ Petrochemical
- ✓ Military, DOD or DOE
- ✓ Government and municipalities

The Environmental Protection Agency (EPA) has offered interim guidance identifying disposal by injection well technology for wastewater contaminated by per- and polyfluoroalkyl substances (PFAS).
